

Heat Pumps

14.0 to 20.0 SEER
8.2 to 10.0 HSPF
Single Stage, Two Stage
and Variable Capacity

CRAFTSMANSHIP THAT MEETS EXACTING ARMSTRONG AIR STANDARDS — AND THE EXPECTATIONS OF HVAC PROFESSIONALS.

THE PROFESSIONAL'S CHOICE

The Professional's Choice

A legacy of craftsmanship and commitment

Our 80-year history is built on the foundation of strong products and even stronger dedication to excellence. The Armstrong Air® full line of heat pumps is the perfect example of what happens when you set out to be the best. Quiet, energy efficient and made with pride by people who know quality, Armstrong Air units represent the premium choice of HVAC professionals throughout North America.

Expert guidance every step of the way

Choosing the right HVAC professional is just as important as the heat pump you're buying. Going with an Armstrong Air Dealer means working with a true HVAC professional. You can be confident in their knowledge and expertise to help you make the right decisions on all your HVAC needs. They'll also help ensure your system operates at maximum performance for years to come.

Creating the perfect environment.

At Armstrong Air, creating the perfect system for you is our first priority. We recognize that buying a new heating and cooling system is a big decision. Having all the facts, and some professional advice, can help you select the system best suited for your home and your family's needs. When selecting a unit, it's important to remember that everyone's needs are different. What's most important to you and your family? Here are a few things to consider:

Efficiency

It's pretty simple. A high-efficiency system helps lower your monthly utility bills. Efficiency is measured in SEER (Seasonal Energy Efficiency Ratio) during the summer and HSPF (Heating Season Performance Factor) during the winter—the higher these numbers, the greater the efficiency. Replacing an older unit with a 14 SEER / 8.2 HSPF or higher unit can increase performance and start saving you money immediately.

Reliability

You can always count on your Armstrong Air unit. Technology developments such as MHT™ and Omniguard™, plus other advanced-design features, work together to deliver premium performance and extend the life of your heat pump.

Air Quality

Where you live matters. Your family's sensitivity to a host of natural and man-made allergens means enhanced air quality is all the more critical in your home. And don't forget humidity levels when you're considering the ideal system for year-round comfort.

Peace of Mind

More control over your comfort—that's our commitment to you. You can see it in our craftsmanship and technology—like our proprietary Comfort Sync™ controls, which allow you to easily monitor your unit's performance and enjoy maximum comfort in your home.

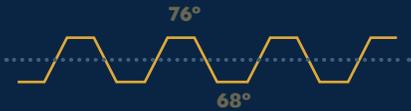

Noise Reduction

Comfort and performance also include quiet operation of your system. Enjoy reduced operating noise with select models featuring a high-quality sound blanket for noise reduction. Plus, Quiet Shift™ Technology reduces sound when transitioning to defrost mode.

Heat Pump System Basics

The most common type of system pairs an exterior heat pump with an interior air handler, working in tandem to circulate air throughout your home. Heat pumps can also be paired with a furnace, which is then called a Dual-Fuel system. Matching your heat pump with a compatible Armstrong Air® air handler or furnace will generate optimum efficiency and ideal system performance.

How compressor stages affect performance

Single stage means heating and cooling are either all the way on or all the way off, creating temperature swings.

Two-stage runs at low or high operating speeds, depending on conditions, creating more even, consistent temperatures.

Variable capacity gradually ramps up and down to keep the temperature exactly where you want it, using even less power.

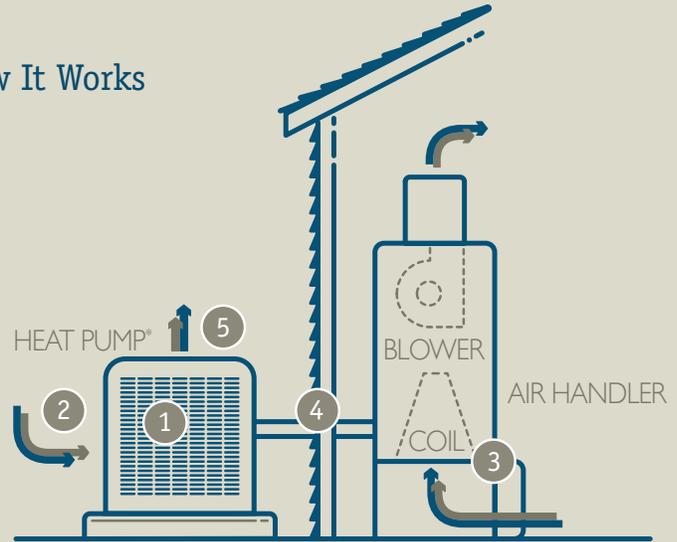

Corrosion Protection

Select Armstrong Air Heat Pump units feature Omniguard™ Total Corrosion Protection Technology, offering improved corrosion protection compared to traditional coils and preserving the life of your system for years to come.

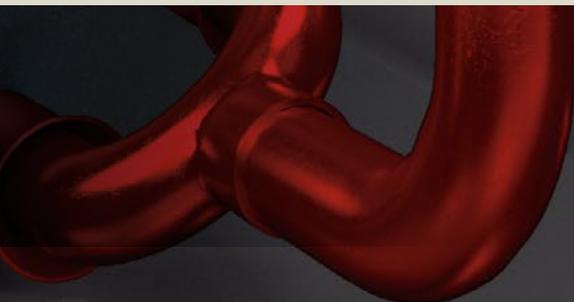

How It Works

* Armstrong Air air handlers also work with Air Conditioners in straight cool configurations.

1. The heat pump on the outside of your home circulates refrigerant that absorbs and releases heat as it travels between the heat pump and the air handler inside.
2. When it's cold outside, a heat pump extracts outside heat and transfers it inside.
3. The refrigerant flows through the air handler's evaporative coil, which features Omniguard Total Corrosion Protection Technology that protects the coil from indoor corrosive elements such as aerosols, cleaners and other chemicals. The blower moves air across the coil surface to warm air that's sent through your home's ductwork.
4. The cold refrigerant is sent back to the heat pump outside so the process can repeat itself and continue to warm your home.
5. When it's warm outside, the heat pump reverses direction and acts like an air conditioner, removing heat from your home.

Exceptional heating & cooling for a home that's just the way you want it.

Inside every Armstrong Air heat pump, you'll find a high level of technology and craftsmanship, backed by a 10-year Limited Warranty on the compressor* and a 10-year Limited Warranty on parts*.

MHT™ Technology

Armstrong Air's proprietary heat transfer system uses a specially designed fan shroud, rifled tubing and lanced coil fins for maximum heat transfer and efficiency.

Noise Reduction

A swept-wing fan blade design reduces turbulence, while a heavy-duty compressor blanket further reduces sound levels.

Quiet Shift™ Technology

Allows heat pumps to enter defrost mode without excessive noise. Since refrigerant pressure is allowed to equalize before the switch, the heat pump can quietly dissipate performance-robbing frost and ice.

Integrated Compressor Protection

High- and low-pressure switches protect the compressor, helping to ensure lasting performance.

Comfort Sync™ Control Panel

All Pro Series™ units continuously monitor internal components for optimum performance and fault prevention, and notify you and your dealer if repairs or maintenance are needed.

Inverter-Driven Scroll Compressor

Rather than running at one or even two speeds, the scroll compressor uses an inverter motor that can change its speed in small, precise increments, saving more energy, while holding your temperature precisely where you set it.

Sealed Contactor with Lugs

Completely covers the contactor, protecting it from debris and insects.

Dual-Fuel

The combination of a gas furnace and an electric heat pump pairs two energy sources for the perfect balance of energy efficiency and comfort.

*Product registration required. Warranty applies to residential applications only. For terms, conditions and exclusions, see full warranty at armstrongair.com.

Whether it's warm or cool, you'll be perfectly comfortable with these reliable single-stage heat pumps.

4SHPI4LB

Proven technology & exceptional value

With SEER ratings beginning at 14, these heat pumps represent an effective heating and cooling solution at a great value. A cost-effective option ideal for regions with long summers, these units allow you to stay comfortable even in high temperatures.

4SHPI5LE

A commitment to exceeding expectations

Delivering up to 15 SEER, the 4SHPI5LE is the perfect blend of higher efficiency, quality and quieter operation. Thoughtfully designed to improve heat transfer and efficiency, these units may qualify for local utility rebates* and reduce monthly energy bills, while providing a comfortable home environment. In addition, Omniguard™ Total Corrosion Protection Technology offers enhanced corrosion protection, lowering overall maintenance costs.

Pro Series™ heat pumps offer ultimate control with up to twice the energy savings of older units.

4SHPI6LS

A powerful combination of performance & efficiency

Offering 16 SEER efficiency, the 4SHPI6LS saves you money every month, and may qualify for local utility rebates.* Because it operates at two different speeds, this heat pump provides enhanced performance with improved control over temperature and humidity for healthier air throughout your home. Plus, the 4SHPI6LS constantly monitors itself for optimum performance and complete peace of mind.

4SHP20LX

Extreme precision & maximum control

The 4SHP20LX variable-capacity heat pump helps keep your home's temperature precisely where you want it and may qualify for local utility rebates.* Rather than running at one or even two speeds, the inverter-driven scroll compressor changes speed in small increments for exact temperatures. Plus Comfort Sync™ zoning delivers precise temperatures from room to room for complete home temperature control.

Proper sizing and installation of equipment is critical to achieve optimal performance. Split system air conditioners and heat pumps must be matched with appropriate coil components to meet ENERGY STAR criteria. Ask your contractor for details or visit www.energystar.gov.
